

[ChangeReqLab]

CASE Study Lab

Introduction: Software changes are started by creating a change request. A change request can be a new feature, a bug fix and improvements.

User stories are short and simple descriptions of features written from the perspective of the person who desires the new capability.

Objectives:

- To write a user story for an existing software feature.
- Select a user story for your mandatory individual portfolio assignment.

Classwork:

- Each Team creates a GitHub Fork of the project repository [JHotDraw].
- In future lab exercises, each team member follow [GitHub flow] to collaborate on projects.
- Select an existing feature in JHotDraw and write the user story. See this list of [existing features]
- Use [GitHub Projects]
- Create a Card for your User Story and put it in the TODO Backlog.

Portfolio Work:

- Write the User Story for your selected JHotDraw feature. Note this is a an artifact for your portfolio.
