

[AnalysisLab]

Impact Analysis Lab

Introduction: Change impact analysis (IA) can be defined as "identifying the potential consequences of a change, or estimating what needs to be modified to accomplish a change".

Objectives:

- Apply static and dynamic analysis to find the estimated impacted set of classes based on your Change request.

Classwork:

- Find The Estimated Impact Set of classes by following the activities illustrated in Figure 7.9 in [Raj13].

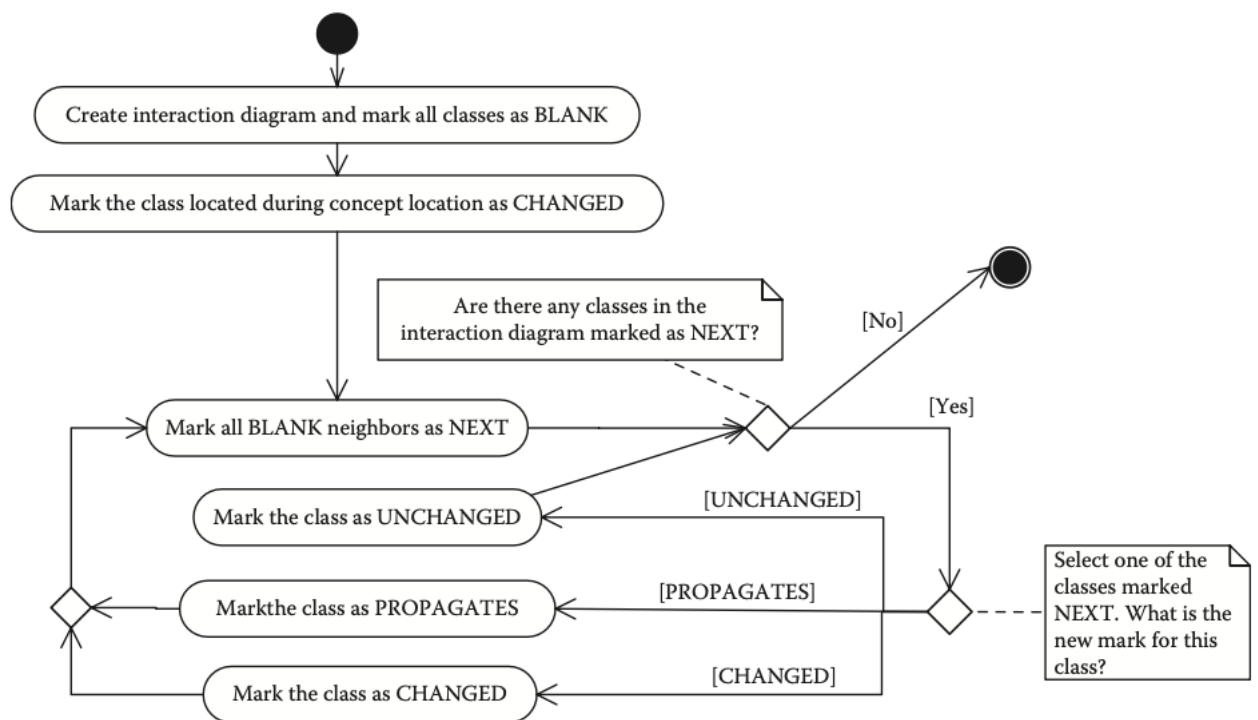

Figure 7.9 Activity diagram of impact analysis.

Portfolio Work: Use Table 1 to list the packages and the number of classes you visited after you located the concept. Write short comments explaining what you have learned about each package and how they contribute to your feature?

Package name	# of classes	Comments

Table 1: The list of all the packages visited during impact analysis.
